INTRODUCTION

Thirteen years have elapsed since the publication of the last complete list of North American Lepidoptera by Dr. J. B. Smith. In the meantime many new species have been described and—what is still more important—revisions of various groups have been made by specialists, resulting in many instances in very radical changes, so that Smith's list, whilst excellent when published, has now become entirely antiquated and of little use as a basis on which to arrange á collection.

It has seemed to us therefore that the publication on our part of this present list may be of some value to students of Lepidoptera who wish not only to arrange their collections but to have before them in a concise form the latest views on the classification of this order of insects.

In general this list is based on the latest revision of each group, combined in many instances, more especially in the so-called Macrolepidoptera, with work which has been carried on for several years in the Barnes Collection in connection with the study of the existing types of North American species and the comparison of specimens with these same types; the synonymy of each species is given as fully as possible in so far as it relates to species described from North American material, and we have incorporated a number of changes in the list which have been commented on in several papers by ourselves which recently appeared in print.

In the DIURNALS we have made the arrangement cor-

respond as far as possible with that advocated by Dr. Seitz in his Macrolepidoptera of the World; we have revised the Lycænid and Hesperid genera to make them conform with the rules of nomenclature as adopted by the International Congress, and in this connection would express our appreciation of the kind assistance rendered us by Mr. Bethune Baker of Edgbaston, England, in determining the Lycænid genera which it is advisable to employ.

In the SPHINGIDÆ we have followed Rothschild and Jordan's masterly revision, making only a few generic changes which we considered advisable.

The general scheme of the ARCTIIDÆ and NOCTUIDÆ has been that of Sir George Hampson's Catalogue of the Lepidoptera Phalænæ of the British Museum, but in the latter family we have been obliged to change the generic conceptions considerably as the method employed by Hampson in determining generic types is not permissable according to the International Rules; these changes have been made the subject of a special paper published recently.

In the GEOMETRIDÆ we have followed Mr. L. B. Prout's careful revisions in the Genera Insectorum and in Seitz's Macrolepidoptera as far as published, making only such changes as our more extended acquaintance with the North American species and their types has rendered necessary; our most hearty thanks are due Mr. Prout for the invaluable aid he has so cheerfully given us in connection with the difficult genera of this group.

The PYRALIDÆ remain more or less as listed by Dr. Smith in so far as the genera are concerned, but numerous shifting of species has been necessitated, especially in the *Phycitinae*, as our knowledge of the same has been increased by long series of both sexes.

Finally with regard to the Microlepidoptera Mr. August Busck of the U. S. National Museum has had the kindness to read over our whole manuscript relating to this group, suggesting many important changes in connection with the sequence of the families and genera, a fact which has rendered this portion of the list much more up-to-date than we could ever have hoped for without Mr. Busck's generous assistance.

With regard to certain generic terms we might note that, following the majority of the European authorities, we have disregarded Hubner's 'Tentamen' as being unpublished; this has resulted in several rather unfortunate substitutions, notably the displacement of the well-known genera *Olethreutes* and *Coleophora* in favor of 'Verzeichniss' names which are not so generally known; we feel, however, that such changes, while regrettable, should be made for the sake of uniformity in the list and in accordance with a strict adherence to the rules of nomenclature.

In the text we have as far as possible used the subdivisions *a, b, c,* etc., to denote geographical races which have often been listed, especially in Europe, as *var.* The term *form* we have applied to a variety which exists alongside the nimotypical form or which may be a seasonal one and we have confined the term *ab.* to so-called freak specimens or sports. In many instances, of course, our grouping is more or less tentative.

Certain European and foreign species which have been erroneously recorded from North America as well as a few species in which the type material, although stated to be North American, has proved foreign we have omitted and append a list of these at the conclusion of the work.

Names preoccupied or cited in error we have marked with an ‡.

Finally we have thought it advisable to include a full index of all the species as well as the genera in order that the numerous shiftings which have been necessary should give no trouble to the average collector in locating any given species.

A few additions and corrections will be found at the end of the list proper.

Decatur, Febry., 1917.

Exchange

A large number of duplicates of North American Lepidoptera which have accumulated in the Barnes Collection, including many species from the West and Southwest, are offered in exchange for series of bred specimens, even of the commoner species, or for species from North America not in the collection. *Desiderata List* sent on application.

Identification of N. American material will be gladly undertaken for the privilege of retaining desired specimens.

In connection with the proposed publication of a full *Catalogue of N. American Lepidoptera* records of captures are much desired in order to establish the geographical range of each species; also data regarding the location of type specimens will be gladly received.
